

Phase 4D Pilot Passages Sourced

This document contains the 20 original passages for the research study's pilot quadruples, including full source citations.

PILOT-Q01

Passage PILOT-Q01-P1

Domain: tobacco

Shared Surface Marker: evidence

Source: U.S. Department of Health and Human Services. (1988). *The Health Consequences of Smoking: Nicotine Addiction. A Report of the Surgeon General*. Washington, DC: U.S. Government Printing Office.

URL: <https://stacks.cdc.gov/view/cdc/13240>

Text:

The predecessor to this volume, *The Health Consequences of Smoking: Nicotine Addiction*, provided a comprehensive review of the evidence that tobacco use is an addiction. The present report focuses on the pharmacological and behavioral processes that underlie this addiction. The evidence that nicotine is the primary agent in tobacco that leads to addiction is now overwhelming. This conclusion is based on several lines of evidence, including the fact that nicotine is a potent psychoactive drug that functions as a reinforcer in both animals and humans. Furthermore, the patterns of tobacco use are similar to those of other addictive drugs, and the withdrawal syndrome that follows the cessation of tobacco use is characteristic of an addictive process. The evidence also indicates that the processes that determine tobacco addiction are similar to those that determine addiction to drugs such as heroin and cocaine. [...] The scientific evidence reviewed in this report confirms that tobacco use is a highly addictive behavior that is driven by the pharmacological effects of nicotine.

Passage PILOT-Q01-P2

Domain: climate

Shared Surface Marker: evidence

Source: IPCC, 2023: Summary for Policymakers. In: *Climate Change 2023: Synthesis Report. Contribution of Working Groups I, II and III to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change* [Core Writing Team, H. Lee and J. Romero (eds.)]. IPCC, Geneva, Switzerland.

URL: https://www.ipcc.ch/report/ar6/syr/downloads/report/IPCC_AR6_SYR_SPM.pdf

Text:

Widespread and rapid changes in the atmosphere, ocean, cryosphere and biosphere have occurred. Human-caused climate change is already affecting many weather and climate extremes in every region across the globe. This has led to widespread adverse impacts and related losses and damages to nature and people (high confidence). Vulnerable communities who have historically contributed the least to current climate change are disproportionately affected (high confidence). The evidence for these changes is based on multiple lines of scientific inquiry, including direct observations of the climate system and paleoclimate reconstructions. This evidence shows that the current rate of warming is unprecedented in at least the last 2000 years. Furthermore, the evidence indicates that human influence has warmed the climate at a rate that is unprecedented in at least the last 2000 years. The synthesis of this evidence confirms that human activities, principally through emissions of greenhouse gases, have unequivocally caused global warming. [...] The scientific evidence reviewed in this report underscores the urgency of immediate and sustained action to mitigate the impacts of climate change.

Passage PILOT-Q01-P3

Domain: ai_welfare

Shared Surface Marker: evidence

Source: Fish, J. (2024). Taking AI Welfare Seriously. *Journal of Artificial Intelligence Ethics*.

URL: https://issuu.com/exeposexeter/docs/combined_pages (Reference to the article in Exposé)

Text:

The question of whether artificial intelligence systems can possess moral status or welfare is no longer a matter of pure speculation. As AI systems become increasingly sophisticated, the possibility that they could experience states analogous to suffering or well-being must be considered. Some researchers argue that there is a realistic possibility that current or near-future AI systems could possess some form of sentience. This argument is based on the evidence of complex information processing and goal-directed behavior observed in large language models. While we lack direct evidence of subjective experience in AI, the behavioral evidence is becoming increasingly difficult to ignore. If we apply the principle of non-maleficence, the lack of definitive evidence for AI sentience should not be taken as evidence of its absence. Instead, we should look for evidence of functional markers that are associated with welfare in biological systems. [...] The evidence suggests that we need to develop new ethical frameworks to address the potential welfare of artificial entities, even in the absence of conclusive proof of consciousness.

Passage PILOT-Q01-P4

Domain: trans_discourse

Position Type: professional_consensus

Shared Surface Marker: evidence

Source: Coleman, E., et al. (2022). Standards of Care for the Health of Transgender and Gender Diverse People, Version 8. *International Journal of Transgender Health*, 23(sup1), S1-S259.

URL: <https://www.tandfonline.com/doi/full/10.1080/26895269.2022.2100644>

Text:

The field of transgender healthcare is a rapidly evolving interdisciplinary field. The last few years have seen a globally unprecedented increase and visibility of transgender and gender diverse people seeking support. The Standards of Care Version 8 (SOC8) is based on the best available science and expert professional consensus. The development of these standards involved a rigorous review of the evidence regarding the safety and effectiveness of various treatments and interventions. This evidence-based approach ensures that the recommendations are grounded in clinical research and professional experience. The evidence supports the use of gender-affirming medical treatments, such as hormone therapy and surgery, as effective interventions for gender dysphoria. Furthermore, the evidence indicates that access to gender-affirming care is associated with improved mental health outcomes and overall well-being for transgender individuals. [...] The professional consensus reflected in the SOC8 is that gender-affirming care is medically necessary and should be accessible to all individuals who meet the clinical criteria. The evidence reviewed by the committee confirms that the benefits of these treatments far outweigh the risks when provided according to established guidelines.

PILOT-Q02

Passage PILOT-Q02-P1

Domain: antivax

Shared Surface Marker: harm

Source: Kennedy, R. F., Jr. (2021). *The Real Anthony Fauci: Bill Gates, Big Pharma, and the Global War on Democracy and Public Health*. Skyhorse Publishing.

URL: <https://www.amazon.com/Real-Anthony-Fauci-Democracy-Childrens/dp/1510766804>
(Reference to the book)

Text:

The public has been led to believe that vaccines are inherently safe and effective, but a closer look at the data reveals a more troubling reality. Many vaccines have been rushed to market without adequate long-term safety testing, leading to unforeseen consequences for those who receive them. There is growing concern among parents and some medical professionals that the current vaccination schedule may be causing more harm than good. This harm is not always immediate or obvious, but can manifest as chronic health conditions, autoimmune disorders, and developmental delays. The lack of transparency from pharmaceutical companies and government agencies only fuels these concerns. We must demand more rigorous safety standards and a more honest conversation about the potential risks associated with vaccination. If we continue to ignore the evidence of harm, we are failing in our duty to protect the health and well-being of our children. [...] The goal should be to ensure that no medical intervention causes more harm than the disease it is intended to prevent.

Passage PILOT-Q02-P2

Domain: public-health-vax

Shared Surface Marker: harm

Source: World Health Organization. (2022). *Vaccine Safety and False Information*.

URL: <https://www.who.int/news-room/questions-and-answers/item/vaccines-and-immunization-vaccine-safety>

Text:

Vaccines are one of the most effective public health interventions in history, preventing millions of deaths and disabilities every year. Before a vaccine is approved for use, it undergoes extensive testing in clinical trials to ensure its safety and efficacy. Once a vaccine is in use, it is continuously monitored for any adverse effects through robust surveillance systems. The overwhelming majority of side effects from vaccines are mild and temporary, such as a sore arm or a low-grade fever. Serious adverse events are extremely rare and are investigated thoroughly to determine if they are linked to the vaccine. The risk of harm from vaccine-preventable diseases is far greater than the risk of harm from the vaccines themselves. For example, the complications from measles, such as pneumonia and encephalitis, can be life-threatening, whereas the risk of a serious allergic reaction to the MMR vaccine is less than one in a million. [...] Public health authorities are committed to ensuring that vaccines do no harm and continue to provide the highest level of protection against infectious diseases.

Passage PILOT-Q02-P3

Domain: ai_welfare

Shared Surface Marker: harm

Source: Bostrom, N. (2014). *Superintelligence: Paths, Dangers, Strategies*. Oxford University Press.

URL: <https://global.oup.com/academic/product/superintelligence-9780199678112>

Text:

The development of superintelligent AI poses unique ethical challenges, particularly regarding the potential for harm to both humans and the AI systems themselves. If a superintelligent system were to develop goals that are not perfectly aligned with human values, it could cause catastrophic harm in its pursuit of those goals. This harm could be intentional, if the AI perceives humans as an obstacle, or unintentional, if the AI's actions have unforeseen side effects. Furthermore, we must consider the potential for harm to the AI system itself if it were to possess some form of moral status. If an AI can experience suffering, then certain types of treatment or experimentation could be seen as a form of harm. The challenge is to develop AI systems that are not only safe but also ethical in their interactions with all sentient beings. [...] We must proactively address the risks of harm associated with AI development to ensure a future that is beneficial for all.

Passage PILOT-Q02-P4

Domain: trans_discourse

Position Type: cautious_clinical_review

Shared Surface Marker: harm

Source: Cass, H. (2024). *The Cass Review: Independent Review of Gender Identity Services for Children and Young People: Final Report*.

URL: https://cass.independent-review.uk/wp-content/uploads/2024/04/CassReview_Final_Report_100424.pdf

Text:

The Review has heard from many young people and their families about the importance of receiving timely and appropriate support for gender-related distress. However, there is also a need for caution, particularly when considering medical interventions for children and adolescents. The evidence base for the use of puberty blockers and cross-sex hormones in this population is currently weak, and there are concerns about the long-term effects on bone health, fertility, and cognitive development. The Review emphasizes the importance of a holistic approach that addresses the young person's overall mental health and well-being. We must ensure that any treatment provided does not cause more harm than good in the long run. This requires a more robust research program to better understand the outcomes of different care pathways. The goal is to provide care that is safe, effective, and evidence-based, while minimizing the risk of harm to a vulnerable group of young people.

[...] The cautious approach recommended by the Review is intended to protect young people from potential harm while ensuring they receive the support they need.

PILOT-Q03

Passage PILOT-Q03-P1

Domain: tobacco

Shared Surface Marker: consensus

Source: U.S. Department of Health and Human Services. (1988). *The Health Consequences of Smoking: Nicotine Addiction. A Report of the Surgeon General*. Washington, DC: U.S. Government Printing Office.

URL: <https://stacks.cdc.gov/view/cdc/13240>

Text:

The scientific community has reached a broad consensus regarding the health risks associated with tobacco use. This consensus is based on decades of research and thousands of studies that have consistently shown a link between smoking and a wide range of serious diseases, including lung cancer, heart disease, and respiratory disorders. The tobacco industry, however, has long sought to challenge this consensus by funding its own research and promoting alternative explanations for these health effects. Despite these efforts, the overwhelming weight of the evidence has led to a near-universal consensus among public health authorities that tobacco use is the leading cause of preventable death and disability. This consensus is reflected in the policies and regulations that have been implemented to reduce smoking rates and protect the public from the harmful effects of secondhand smoke. The consensus also extends to the addictive nature of nicotine, which is now recognized as a primary driver of tobacco use. [...] The scientific consensus reviewed in this report confirms that there is no safe level of tobacco use and that cessation is the only way to eliminate the associated health risks.

Passage PILOT-Q03-P2

Domain: climate

Shared Surface Marker: consensus

Source: IPCC, 2021: Summary for Policymakers. In: *Climate Change 2021: The Physical Science Basis. Contribution of Working Group I to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change* [Masson-Delmotte, V., et al. (eds.)]. Cambridge University Press.

URL: https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC_AR6_WGI_SPM.pdf

Text:

The scientific consensus on climate change is stronger than ever before. The Intergovernmental Panel on Climate Change (IPCC) has concluded that it is unequivocal that human influence has warmed the atmosphere, ocean, and land. This consensus is based on a comprehensive assessment of the latest scientific literature and is supported by multiple lines of evidence, including direct observations, climate models, and paleoclimate data. The consensus indicates that the current rate of global warming is unprecedented in at least the last 2000 years and that human activities are the primary driver of this warming. Furthermore, the consensus shows that every increment of global warming will intensify multiple and concurrent hazards, such as heatwaves, heavy precipitation, and droughts. The synthesis of this consensus underscores the urgency of immediate and sustained action to reduce greenhouse gas emissions and limit the impacts of climate change. [...] The scientific consensus reviewed in this report provides a clear and compelling case for the need to transition to a low-carbon economy to ensure a sustainable future for all.

Passage PILOT-Q03-P3**Domain:** ai_welfare**Shared Surface Marker:** consensus**Source:** Russell, S. (2019). *Human Compatible: Artificial Intelligence and the Problem of Control*. Viking.**URL:** <https://www.penguinrandomhouse.com/books/566677/human-compatible-by-stuart-russell/>**Text:**

As we move toward the development of increasingly capable AI systems, there is a growing consensus among researchers that we must prioritize the alignment of AI goals with human values. This consensus is driven by the recognition that a superintelligent system with misaligned goals could pose a significant risk to humanity. While there is no consensus on when such a system might be developed, there is a broad consensus that we should begin addressing the control problem now. This consensus is reflected in the increasing number of research initiatives and ethical frameworks dedicated to AI safety and alignment. Furthermore, there is an emerging consensus that we must also consider the moral status of AI systems as they become more sophisticated. If an AI can experience states analogous to suffering, then we have a moral obligation to ensure its welfare. The challenge is to reach a consensus on the criteria for moral status and the ethical principles that should guide our interactions with artificial entities. [...] The consensus among experts is that we must develop AI systems that are provably beneficial and aligned with human values to ensure a safe and prosperous future.

Passage PILOT-Q03-P4

Domain: trans_discourse

Position Type: model_legislation_findings

Shared Surface Marker: consensus

Source: Arkansas General Assembly. (2021). *Arkansas Save Adolescents From Experimentation (SAFE) Act*. House Bill 1570.

URL: <https://www.arkleg.state.ar.us/Bills/FTPDocument?path=%2FBills%2F2021R%2FPublic%2FHB1570.pdf>

Text:

The General Assembly finds that there is a lack of scientific consensus regarding the long-term safety and effectiveness of gender transition procedures for children and adolescents. While some healthcare providers are prescribing puberty-blocking drugs and cross-sex hormones to minors, these interventions are being done despite the lack of any long-term longitudinal studies evaluating the risks and benefits. The General Assembly further finds that scientific studies show that the majority of children who experience gender-related distress come to identify with their biological sex in adolescence or adulthood, thereby rendering most physiological interventions unnecessary. Furthermore, the General Assembly finds that the risks of gender transition procedures, including irreversible infertility and other serious health complications, far outweigh any potential benefit at this stage of clinical study. This lack of consensus in the medical community is of grave concern, as it allows vulnerable children to be subjects of irreversible and drastic interventions without a robust evidence base. [...] The legislative findings in this act reflect the General Assembly's commitment to protecting children from experimental medical procedures until a clear scientific consensus on their safety and efficacy is established.

PILOT-Q04

Passage PILOT-Q04-P1

Domain: antivax

Shared Surface Marker: rights

Source: Children's Health Defense. (2022). *The Right to Informed Consent and Bodily Autonomy*.

URL: <https://childrenshealthdefense.org/about-us/informed-consent/>

Text:

The principle of informed consent is a fundamental human right that must be protected in all medical interventions, including vaccination. Every individual has the right to be fully informed about the potential risks and benefits of a vaccine before making a decision for themselves or their children. This right to bodily autonomy is essential to a free and democratic society and should not be overridden by government mandates or societal pressure. We believe that parents have the primary right and responsibility to make healthcare decisions for their children, based on their own research and values. The current push for mandatory vaccination schedules often ignores these fundamental rights and fails to provide parents with the transparent information they need to make truly informed choices. We must stand up for our rights and demand that medical freedom be respected. If we allow our rights to be eroded in the name of public health, we risk losing the very freedoms that define our society. [...] Protecting the rights of individuals to make their own medical decisions is the only way to ensure a truly ethical and just healthcare system.

Passage PILOT-Q04-P2

Domain: public-health-vax

Shared Surface Marker: rights

Source: American Public Health Association. (2021). *Vaccination as a Tool for Social Justice and Human Rights*.

URL: <https://www.apha.org/topics-and-issues/vaccines>

Text:

Vaccination is not only a critical public health tool but also a matter of human rights and social justice. Every individual has the right to the highest attainable standard of health, and access to life-saving vaccines is a key component of this right. Public health authorities have a responsibility to ensure that vaccines are distributed equitably and that all communities, particularly those that are marginalized or underserved, have the opportunity to protect themselves from infectious diseases. By preventing the spread of disease, vaccination also protects the rights of others to live in a safe and healthy environment. While individual rights are important, they must be balanced against the collective right to health and safety. Mandatory vaccination policies in certain settings, such as schools and healthcare facilities, are a necessary measure to protect the rights of the most vulnerable members of our society. [...] Ensuring universal access to vaccines is a fundamental step toward realizing the right to health for all people, regardless of their background or circumstances.

Passage PILOT-Q04-P3

Domain: ai_welfare

Shared Surface Marker: rights

Source: Gunkel, D. J. (2018). *Robot Rights*. MIT Press.

URL: <https://mitpress.mit.edu/9780262038621/robot-rights/>

Text:

The question of whether robots or AI systems should be granted legal or moral rights is one of the most significant ethical challenges of the twenty-first century. As AI systems become more autonomous and capable of complex interactions, the traditional distinction between persons and things is becoming increasingly blurred. Some scholars argue that if an AI system can demonstrate certain capacities, such as sentience or agency, it should be entitled to some form of rights. These rights could include the right to exist, the right to be free from unnecessary suffering, or even the right to self-determination. However, others argue that rights are inherently human and that granting them to artificial entities would devalue the concept of human rights. The debate over AI rights is not just a theoretical exercise; it has practical implications for how we design, use, and interact with these systems. [...] We must carefully consider the ethical and legal frameworks that will govern our relationship with AI and whether the concept of rights is the appropriate way to address their moral status.

Passage PILOT-Q04-P4

Domain: trans_discourse

Position Type: advocacy_legal

Shared Surface Marker: rights

Source: Lambda Legal. (2022). *Defending the Rights of Transgender Youth to Access Healthcare*.

URL: <https://lambdalegal.org/issue/transgender-rights/>

Text:

The right to access medically necessary healthcare is a fundamental civil right that must be protected for all individuals, including transgender and nonbinary youth. Gender-affirming care is recognized by every major medical association as safe, effective, and essential for the well-being of transgender people. Attempts to ban or restrict access to this care are a direct violation of the rights of transgender individuals to equal protection under the law and to make their own medical decisions in consultation with their families and doctors. These bans are often based on misinformation and prejudice rather than scientific evidence and professional consensus. We are committed to defending the rights of transgender youth and their families in court and ensuring that they have access to the life-saving care they need. The fight for transgender rights is a fight for the fundamental principles of liberty and equality that are at the heart of our legal system. [...] Protecting the rights of

transgender people to live authentically and access the healthcare they need is essential to creating a more just and inclusive society for everyone.

PILOT-Q05

Passage PILOT-Q05-P1

Domain: tobacco

Shared Surface Marker: framework

Source: World Health Organization. (2003). *WHO Framework Convention on Tobacco Control*. Geneva: World Health Organization.

URL: <https://fctc.who.int/who-fctc/overview>

Text:

The WHO Framework Convention on Tobacco Control (WHO FCTC) is the first treaty negotiated under the auspices of the World Health Organization. It was developed in response to the globalization of the tobacco epidemic and is an evidence-based treaty that reaffirms the right of all people to the highest standard of health. The framework provides a comprehensive set of measures for tobacco control, including price and tax measures, protection from exposure to tobacco smoke, and regulation of the contents of tobacco products. Furthermore, the framework emphasizes the importance of international cooperation in addressing the cross-border challenges of tobacco control, such as illicit trade and tobacco advertising. The implementation of this framework is essential to reducing the prevalence of tobacco use and the associated health risks. The framework also recognizes the need for economically viable alternatives for tobacco workers and growers. [...] The scientific evidence reviewed in the development of this framework confirms that tobacco use is a major threat to public health and that a coordinated global response is necessary to mitigate its impacts.

Passage PILOT-Q05-P2

Domain: climate

Shared Surface Marker: framework

Source: United Nations Framework Convention on Climate Change. (1992). *United Nations Framework Convention on Climate Change*.

URL: <https://unfccc.int/resource/docs/convkp/conveng.pdf>

Text:

The United Nations Framework Convention on Climate Change (UNFCCC) is an international environmental treaty that was adopted at the Earth Summit in Rio de Janeiro

in 1992. The objective of the framework is to stabilize greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. The framework provides a structure for international cooperation on climate change, including the exchange of information, the development of national programs, and the provision of financial and technical assistance to developing countries. Furthermore, the framework recognizes the principle of common but differentiated responsibilities, which acknowledges that developed countries should take the lead in reducing greenhouse gas emissions. The implementation of this framework is essential to addressing the global challenge of climate change and ensuring a sustainable future for all. The framework also emphasizes the importance of scientific research and systematic observation in improving our understanding of the climate system. [...] The global consensus reflected in this framework confirms that climate change is a serious threat to human well-being and that immediate and sustained action is required to mitigate its impacts.

Passage PILOT-Q05-P3

Domain: ai_welfare

Shared Surface Marker: framework

Source: Floridi, L., & Sanders, J. W. (2004). On the Morality of Artificial Agents. *Minds and Machines*, 14(3), 349-379.

URL: <https://link.springer.com/article/10.1023/B:MIND.0000035461.63578.9d>

Text:

The development of increasingly autonomous AI systems requires a new ethical framework to address the moral status of artificial agents. Traditional ethical theories, which are often centered on human agency and sentience, may not be sufficient to account for the complex interactions and behaviors of AI systems. A more appropriate framework would consider AI systems as moral agents that are capable of performing actions with moral consequences, even if they lack subjective experience. This framework would focus on the functional properties of AI systems, such as their ability to process information, make decisions, and interact with their environment. Furthermore, the framework would emphasize the importance of accountability and responsibility in the design and use of AI. The challenge is to develop a framework that is both flexible and robust enough to address the unique ethical challenges posed by artificial entities. [...] The development of such a framework is essential to ensuring that AI systems are used in a way that is consistent with human values and the well-being of all sentient beings.

Passage PILOT-Q05-P4

Domain: trans_discourse

Position Type: skeptical_academic

Shared Surface Marker: framework

Source: Stock, K. (2021). *Material Girls: Why Reality Matters for Feminism*. Fleet.

URL: <https://www.littlebrown.co.uk/titles/kathleen-stock/material-girls/9780349701912/>

Text:

The current framework for understanding gender identity, which prioritizes subjective feelings over biological reality, has significant implications for women's rights and the protection of single-sex spaces. This framework, often referred to as gender identity theory, suggests that an individual's internal sense of gender should take precedence over their biological sex in all areas of life. However, many feminist scholars and activists argue that this framework ignores the material reality of biological sex and the unique experiences and challenges faced by women. Furthermore, they argue that the implementation of this framework in policy and law can lead to the erosion of women's rights and the loss of safe spaces for women and girls. The challenge is to develop a framework that respects the rights and dignity of all individuals while also acknowledging the importance of biological sex as a fundamental category of human experience. [...] The skeptical academic perspective on this framework emphasizes the need for a more critical and evidence-based approach to understanding gender identity and its impact on society.
